Claims 22-25 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 7 July 2005.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 20 and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Brzezinski et al. Brzezinski et al shows a vane body (Fig. 2) with major and minor edges and major sides. Each edge has a lip 41, 85, extending from both sides. Therefore, a lip 85 projects outwardly from a first major side (right side of lower vane), and a lip 41 projects from a second major side (left side of lower vane). In the same way, ribs 35 extend from both major sides of the vane.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carey et al. or Klingberg in view of Brzezinski et al. Cary shows a damper blade that has opposed edges, vane turning surface (lip) 14 that extends along the full length of the edge, and a central pivot shaft 11-12 (Fig. 1). Fig. 9 shows an embodiment with lips 14, 14' extending perpendicularly from the vane surface in the direction opposite from the opening direction of

Art Unit: 3753

rotation of the vane. If the term "drive mechanism" can be seen as the shaft 11-12, then the claims are anticipated. If "drive mechanism" means a separate mechanical drive to rotate the shaft, then it would have been obvious (if not inherent) to provide means to rotate the damper shaft to give it added utility. Klingberg shows rectangular vanes 17 that rotate in opposite directions. Each vane has a lip 22 that extend along the length of the edge and extend in opposite directions. It would have been obvious at the time the invention was made to add corrugations/rigs to the Carey or Klingberg vanes to strengthen the vanes as taught by Brzezinski et al. (col. 3, lines 37-42).

Claims 1-14, 17-19, 27, 29, 30, and 32 are allowed.

Applicant's arguments with respect to claims 20 and 31 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
